

Double Pendulum more robust Four methods on their common saved numerical prefix

— P3
 — Huan
 — Xiangru
 - - - Native
 █ Initial box
 Safe band for all t in $[0, 0.4]$

All panels draw the common numerical prefix: 64 steps to 0.32 s, 225 boxes per step. Common saved Safe prefix ends at 0.30 s (dotted).
 Steps 61-64 retain the saved band crossings; gray region has no four-way common data. Huan/Xiangru/P3 save through 0.36 s; Native through 0.32 s.
 Whole-step axis-aligned box unions; no interpolation, independent NNCS certificate, trajectory counterexample, or full-horizon timing claim.
