

TORA reach-tanh: current P3 + three historical author methods · official u=11f

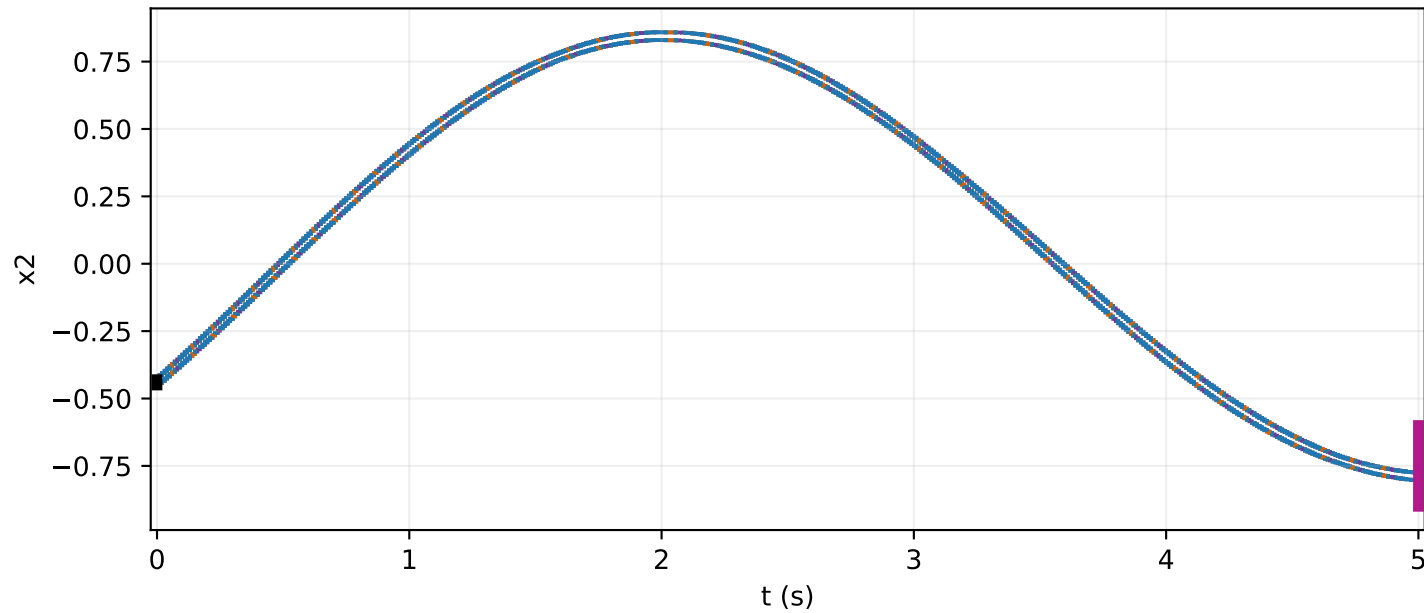

x1: saved whole-step tube

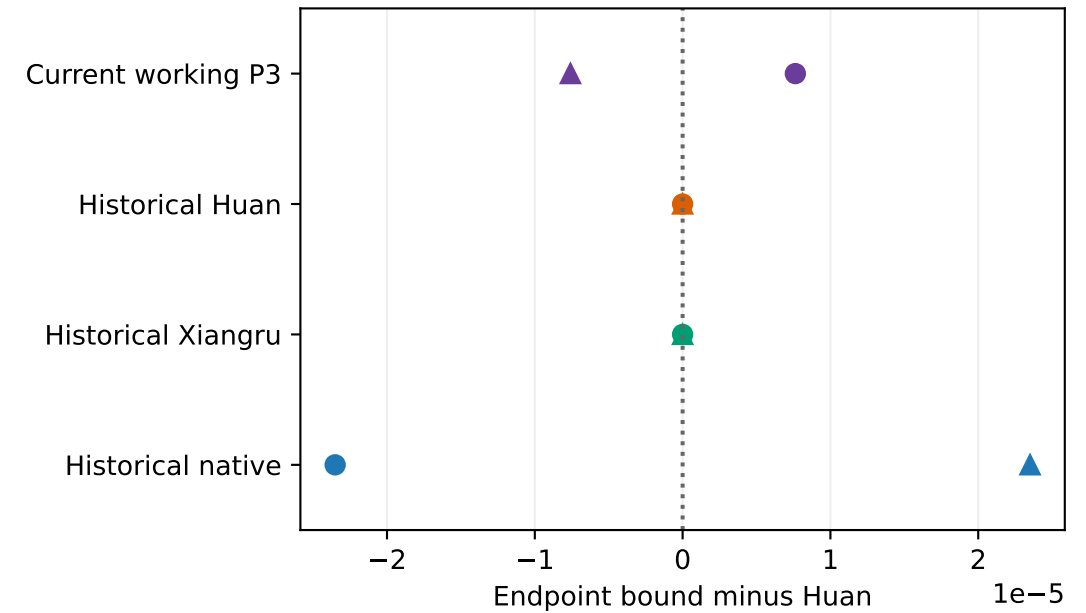

T=5 x1: circle lower, triangle upper

x2: saved whole-step tube

T=5 x2: circle lower, triangle upper

All four methods have 500 saved 0.01 s intervals. Huan/Xiangru coincide; no missing interval is filled.
 Initial is shown at t=0; target only at T=5. Mixed generations and saved axis boxes imply neither independent proof nor speed ranking.
 Historical P3 is reserved for the separate generation-comparison figure. State units were not declared in the saved plot contract.
