

NAV Robust: one saved x/y tube projection per method

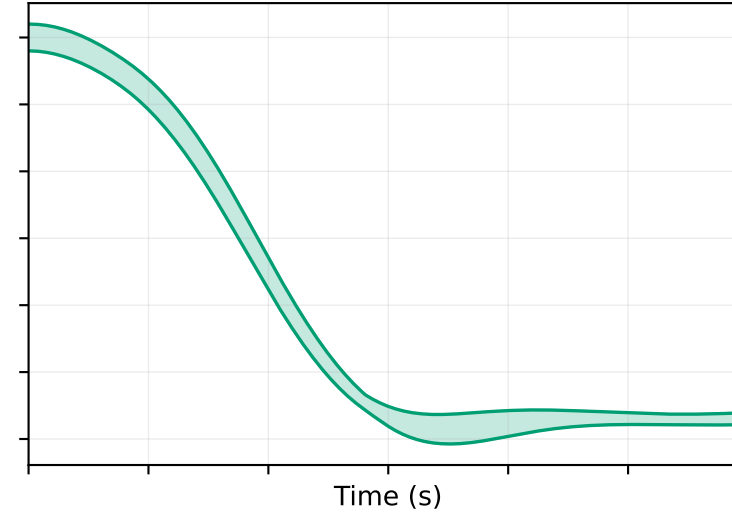

old GPU ours (historical)

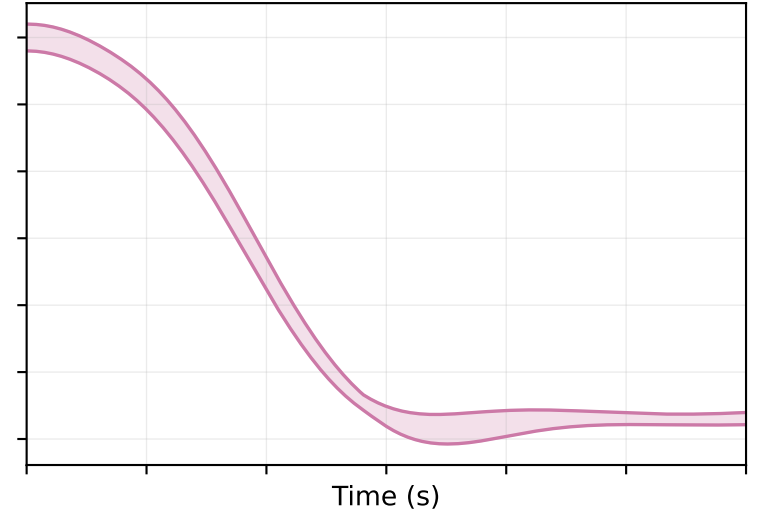

old Huan (historical)

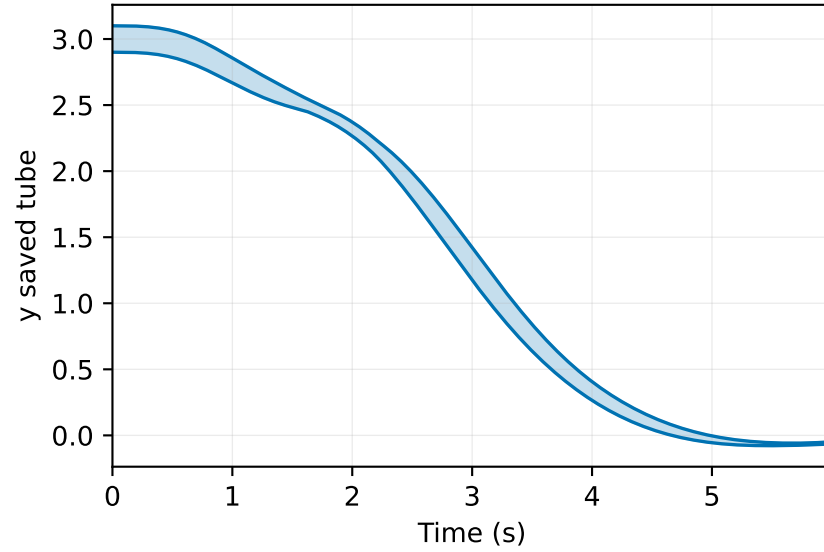

old Xiangru (historical)

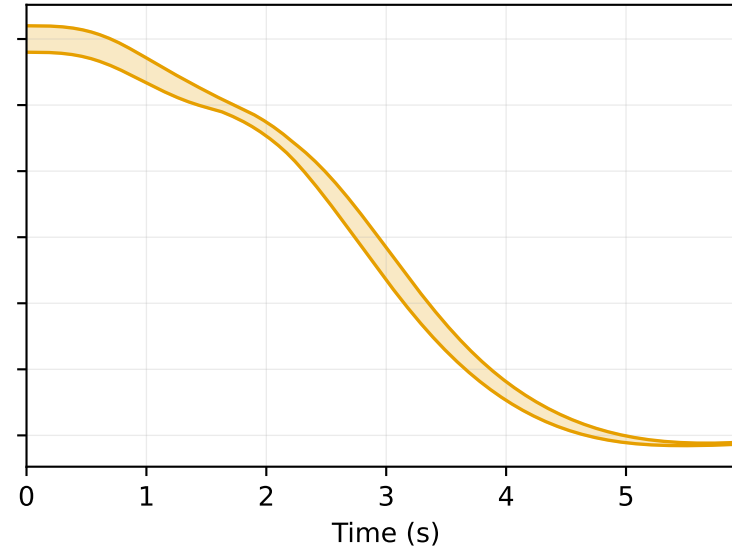

Flow* native (historical)

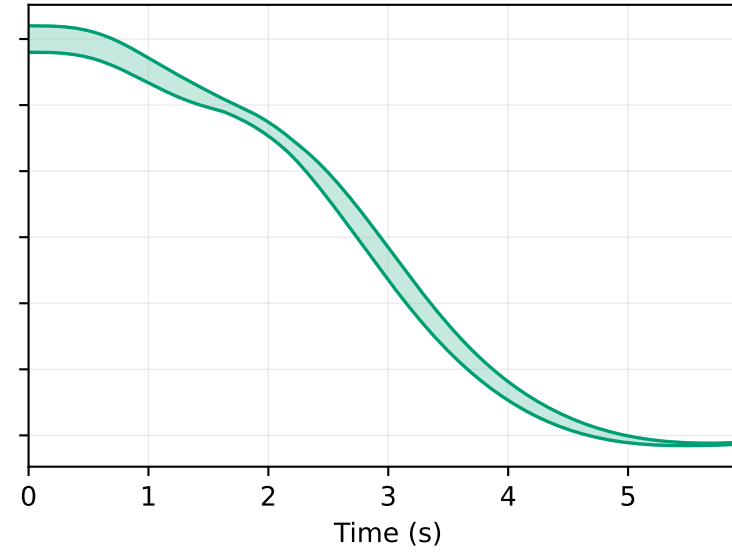

old GPU ours (historical)

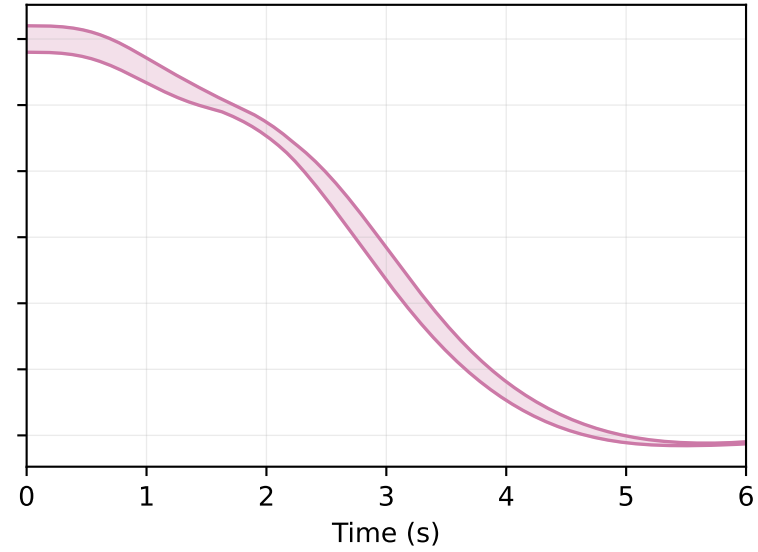

old Huan (historical)

old Xiangru (historical)

Flow* native (historical)

All four methods have 600 saved steps. Huan and Xiangru bounds coincide exactly; old GPU ours is not working P3.
Each row shares one y-axis. x/y projections and shading are numerical saved intervals, not an independent NNCS proof.
