

Historical TORA reach-tanh · official ReLU³/tanh, $u = 11f$ · full initial box

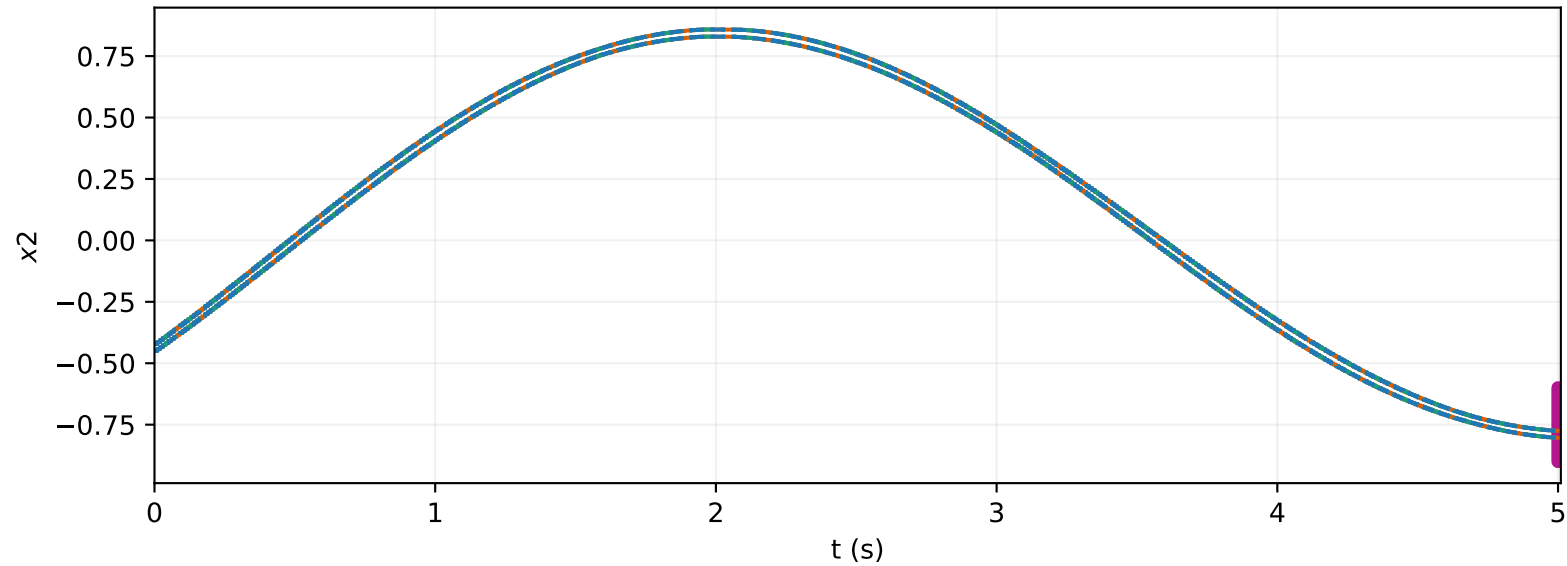

Saved whole-step x1 tube (500 × 0.01 s)

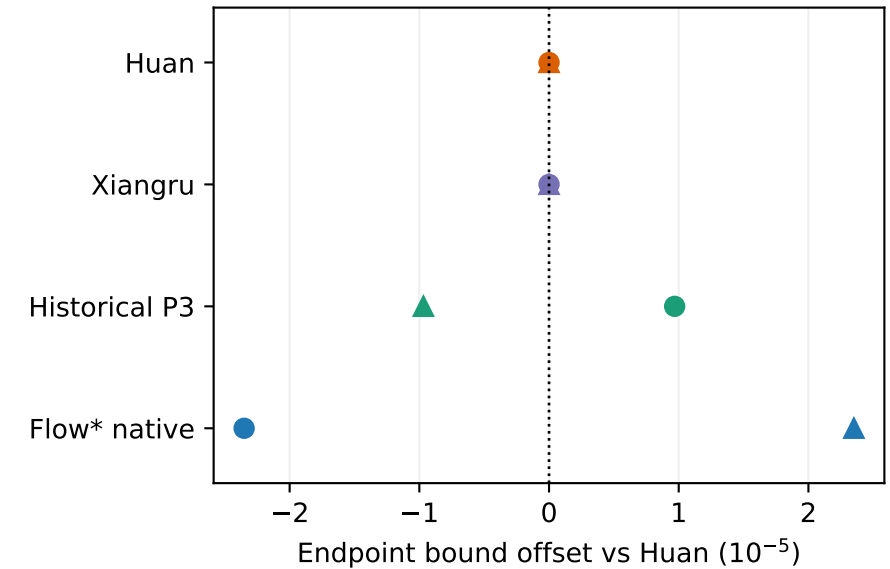

$T = 5$ x1: ○ lower, △ upper

Saved whole-step x2 tube (500 × 0.01 s)

$T = 5$ x2: ○ lower, △ upper

Four archived full numeric T=5 histories; Huan and Xiangru saved tube bounds coincide. Magenta marks target only at T=5. All saved endpoints lie in target. GPU result receipts have no property verdict; native author endpoint checker: VERIFIED. Historical P3 used engine_linear_leaf_v2. Axis-aligned boxes do not establish an independent end-to-end NNCS certificate.
