

TORA remain · h=0.05 supplemental numerical profile

Saved whole-step x4 tube, 12-box union

T=20 endpoint union

All four methods: 12×400 saved numeric ranges to $T=20$, all tube boxes inside $[-2,2]^4$. Huan/Xiangru x_4 bounds coincide.
 Native author checker: VERIFIED; P3/Huan/Xiangru: no explicit checker line. Axis boxes only; no independent NNCS proof.
 This $h=0.05$ profile is separate from the fixed $h=0.1$ main table; single-run times are not ranked.
